

THE MOLECULAR BIOLOGY OF CANCER

**#Cells&Disease**

An examination of the molecular mechanisms that contribute to tumor formation, the hallmarks of cancer and their relationship to therapeutic strategies.

TOPICS

- Hallmarks of cancer
- Cancer progression and metastasis
- Cancer research origins
- Microbes and cancer
- Oncogenes and tumor suppressors
- p53 and cell death
- Autophagy and cell survival
- Epigenetics and cancer
- Synthetic lethality strategies in cancer therapy
- Clonal evolution and cancer stem cells
- Biomarkers
- Drug development and clinical trials
- Cancer immunology
- Personalized medicine
